Managing Bentley Licenses Feature Comparison

Bentley® License Control Feature	SofTrack	Other
Control Use of Bentley Licenses by Calendar 10-Minute	✔	
Control Use of Bentley Licenses by Calendar Hour	✔	
Block usage of unlicensed Bentley applications and alert administrator	✔	
When using Calendar 10-Minute configuration, if all licenses are in-use, give any subsequent users 9 minutes of free usage per Bentley's licensing policy	✔	
When a user exits a Bentley License, the license is held for the duration of the Calendar period (10-minute or Hour) and can be used by any user on that workstation – not only the user who last used it	✔	
Control Use of Bentley Licenses with optional 10-minute minimum usage	✔	
Control Use of Bentley Licenses with optional 30-minute minimum usage (gINT)	✔	
Control Use of Bentley Licenses by Calendar Day (Enterprise License Subscription or ELS)	✔	
When a user exits an ELS Bentley License, the license is held for the duration of the Calendar Day and can be used by any user on that workstation – not only the user who last used it	✔	
Control Use of Bentley Licenses with optional timezone setting for ELS Calendar Day start	✔	
Ability to check out licenses for offline use to assist in maintaining Calendar 10-Minute, Calendar Hour and Calendar Day control	✔	
Monitor and optionally block use of Bentley Licenses for offline/disconnected computers	✔	
Automatically Identify Bentley License usage by Product ID	✔	
Block Use of Bentley Licenses by Product ID before it is engaged	✔	
Monitor and Control Multiple Bentley Licenses by Product ID used by a single application instance	✔	
Monitor and Control MDL sub-launch Bentley Licenses by Product ID	✔	
Monitor and Control by Bentley Site Activation Codes	✔	
Monitor, Control, and/or Block Bentley License usage by the feature engaged (pipe count, inlet count, pond count, signal count, link count, and all others)	✔	
Monitor and Control Bentley License usage by Bentley Product ID in 3rd party product such as AutoCAD and Outlook	✔	
Monitor and Control Bentley XM/2004 License usage by Bentley Product ID	✔	
Detect idle applications and warn user and optionally terminate application	✔	
Alert administrator when Bentley applications are idle	✔	
Alert administrator (any user) when Bentley licenses are at the maximum usage (an administrator configures the level of usage at which an alert is triggered)	✔	
Friendly web page that any end user can use to see up-to-the-minute details of who is using Bentley Licenses by username and workstation name	✔	
When usage of a Bentley License is blocked, the user can optionally be queued for priority access when the license becomes available; when available, the license is exclusively held for that user for 1-30 minutes (defined by Administrator) to give the user time to start using the Bentley license	✔	
Automatic web page reports showing Bentley Calendar 10-Minute, Calendar Hour and Calendar Day usage, maximum per day	✔
