SofTrack Smart Inventory

Automatic Application Discovery and Usage Detection for Windows® and Macintosh® workstations

Overview

SofTrack's Smart Inventory enables you to automatically detect all applications installed on your Windows® and Macintosh® workstations. Application usage is automatically audited without requiring you to know what applications are installed! Quickly gain an understanding of your workstation application configurations. Detect redundant installations by application serial number (Windows® applications only). Save money when you discover applications installed that are not in-use and re-deploy those applications where needed. Additionally, stop paying for applications licenses you are not using. Find applications that are under-utilized, users may require additional training to make the most of the applications you have purchased.

SofTrack installs quickly and simply into your existing infrastructure with no downtime required. Contact us today for your live demonstration of SofTrack.

Benefits

- Save money on upgrades and maintenance renewals when you remove unused applications;
- Maintain your license compliance by knowing where your applications are installed and how they are used;
- Redeploy unused applications from workstations where not used to where needed;
- Automatically discover all applications installed – no requirement to previously "know" what applications you have;
- Locate applications that are under utilized and provide users with additional training to more effectively use your applications;
- Discover "old software" that is still installed on workstations where no longer used and re-deploy.

Features

- Operates as a system kernel service, tracks all user application launches;
- Smart Inventory data is collected to a secure server directory and is available for immediate reporting;
- Detects all 16bit, 32bit and 64bit software;
- Collects the number of times applications are used;
- Displays date of most recent use for each application;
- Reports by workstation or by application;
- Comprehensive reports shows where applications are installed but never used;
- Same technology can be used to enforce license compliance;
- Supports all versions of Windows®, and Macintosh® OS9 and OSX.
