

Mergers and Acquisitions?

Has your organization acquired or merged with other entities? If so you will need to know what software is installed and how it is being used. You will need to determine whether or not sufficient software licenses have been purchased and whether or not a software licensing nightmare awaits you.

Introducing SofTrack's Smart Inventory.

SofTrack's Smart Inventory provides you with dependable insight on what software is installed including publisher, version and serial numbers. Additionally, SofTrack's Smart Inventory will provide reports of how the software is being used. SofTrack installs quickly and simply and you do not need to know what software is installed ahead of time, SofTrack will automatically detect it for you!

Server Consolidation?

Do you know how your network is being used? Do you need to keep business interruptions to a minimum as you consolidate servers?

If your network has grown due to mergers, acquisitions and so on, you will eventually want to consolidate servers into a more manageable configuration. When you do this you will need insight on how those servers are being utilized.

Introducing SofTrack's File Use Audit.

SofTrack's File Use Audit provides you with a comprehensive trail of all remote access performed by each workstation. Discover the server, share/volume, path and filename of each remote access. Discover how your fragmented network is being used. This insight will provide you with the details you need to properly accomplish server consolidation within your network.
